

Stories from the Deep South 2

Task No. 1: Look at **page 83** in your book! Do the exercise **No. 2 a), b), and d)**. For d) I want you to write about **80-100 words**.

(This was last week's extra task. If you haven't done it, then do it for this week!)

Task No. 2: Vocabulary: Don't forget to learn the new vocabulary!

a) Open your book and make a little table (Tabelle) and write down the words from p. 212 (Unit 4: Stories from the Deep South) to p. 213 (last word: However,..). Do your best to learn them!

Example:

| German | English |
|---------------|--------------|
| flow | fließen |
| be well known | bekannt sein |
| | |

b) I made you a little test. Try to fill it out without looking at your book or table (be honest with yourself! 😊). First fill in the words you know with a pencil of your choice. Then look up the words you didn't know and write them down **with another color**.

Task No. 3:

a) Read the article from the online magazine *The Guardian*. The article has some difficult and unknown words in it. Use the internet to find the unknown words.

b) Answer the following question in German: Sind *Native Americans* anfälliger für Krankheiten wie das Coronavirus? (Eine Antwort von 3-4 Sätzen ist ausreichend).

Note: Take a clear(!) picture of your work and send it to me via email. Use only this Email address: zonara.ullah@hbg-koeln.de. Send me your work until Friday, 8th May 2020.

Don't worry if you don't have everything right. If you have ANY question than please contact me!

Task No. 2: Vocabulary test

| German | English |
|--------------------------|----------------|
| Baumwolle | |
| | hunt |
| Weg, Pfad | |
| Adler | |
| | territory |
| | community |
| Jn. zwingen etwas zu tun | |
| Abschlussfeier | |
| | landowner |

Task No. 3:

Native Americans being left out of US coronavirus data and labelled as 'other'

Native Americans are being left out of demographic data on the impact of the coronavirus across the US. This raises fears (**Angst**) of hidden health emergencies in one of the country's most vulnerable populations (**anfälligeste Bevölkerung**).

A Guardian analysis found that about 80% of state health departments have released some racial demographic data, which has already revealed stark disparities (**starke Unterschiede**) in the impact of Covid-19 (**Auswirkung des Coronavirus**) in black and Latinx communities. But of those states, almost half did not explicitly include Native Americans in their breakdowns (**Unterteilung**) and instead categorized them under the label "other".

"By including us in the other category it effectively eliminates us in the data," Abigail Echo-Hawk (Pawnee), director, urban Indian health board and chief research officer, told the Guardian.

In states that do categorize Native Americans in the demographic results, early data indicates dramatically disproportionate rates of infection and death (**ungleiche Infektionsraten**). Last week, the Arizona department of health services reported that Native Americans make up 16% of the state's Covid-19 related deaths, despite representing only 6% of the state's population.

This week, the health authority for the Navajo Nation, which includes areas of Arizona, Utah and New Mexico, reported 1,197 positive coronavirus cases and 44 deaths. If it were a state, it would rank third in the country for confirmed cases per 100,000 population.

Communities of color are not more susceptible (**anfälliger**) to coronavirus, but because of years of unequal access to healthcare, clean water and nutritious food, they are at greater risk of developing complications. According to the Centers for Disease Control and Prevention (CDC), Native Americans experience diabetes three times more than any other racial or ethnic group in the United States, and have the highest rates of asthma.
